Sequence 1711, Application US/09989789

Patent No. US20020063379A1

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: LIU, Qiang

TITLE OF INVENTION: POSITION DEPENDENT RECOGNITION OF GNN NUCLEOTIDE

TITLE OF INVENTION: TRIPLETS BY ZINC FINGERS

FILE REFERENCE: 8325-0011.20 / S11-US2

CURRENT APPLICATION NUMBER: US/09/989,789

CURRENT APPLICATION NUMBER: 2002-03-25

NUMBER OF SEQ ID NOS: 4085

SOFTWARE: PATENTING DATE: 2002-03-25

SOFTWARE: PATENTING DATE: 2002-03-25

Patent No. US20020063379A1

GENERAL INFORMATION:

APPLICANT: LIU, Qiang

TITLE OF INVENTION: POSITION DEPENDENT RECOGNITION OF GNN NUCLECTIDE

TITLE OF INVENTION: POSITION DEPENDENT RECOGNITION OF GNN NUCLECTIDE

TITLE OF INVENTION: TRIPLETS BY ZINC FINGERS

FILE REFERENCE: 8325-0011.20 / S11-US2

CURRENT APPLICAND NUMBER: US/09/989,789

CURRENT FILING DATE: 2002-03-25

NUMBER OF SEQ ID NOS: 4085

SOFTWARE: Patentin Ver. 2.0

Screening compound for interaction with molecular target by contacting compound with cells, comprising exogenous zinc finger protein that modulates expression of target, and determining values of properties of Human, KCA4, EPO, molecular target, zinc finger protein; ZFP; cellular process; signal transduction; drug-screening. Human KCA4 protein Fl recognition helix. AAE08727 standard; peptide; 7 AA (SANG-) SANGAMO BIOSCIENCES INC. 08-FEB-2001; 2001WO-US004301. 08-FEB-2000; 2000US-0181117P. (first entry) WPI; 2001-522491/57. WO200159450-A2. Homo sapiens. 15-NOV-2001 16-AUG-2001. AAE08727; Case C; AAE0872

Example 10; Page 73; 99pp; English.

The invention relates to a method of screening a compound for interaction with a molecular target. The method involves contacting first and second cells with the compound and determining the values of properties of the compound. The second cell comprises an exogenous zinc finger protein (ZFP) that modulates the expression of the molecular target, or isolating membranes from cell comprising ZFP. The methods allow for high throughput screening of candidate compound and reduces the incidence of false positives. The methods are useful for screening a compound for interaction with a molecular target or for screening a compound for its effect on a cellular process. The method is useful for testing a compound for its capacity to transduce a signal to the molecular target or its capacity to block transduction of a signal through the molecular target,

                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to regulating the expression of a gene residing in the chromatin of a cell. The method involves identifying one or more accessible regions in cellular chromatin associated with gene; designing a regulatory molecule, where the regulatory molecule comprises a DNA-binding domain targeted to a sequence within the accessible region, and contacting the expression of a gene (e.g., a gene encoding a unclear receptor such as estrogen receptor alpha (ERalpha), estrogen receptor beta (ERbeta), hepatocyte nuclear factor 4 alpha (ENRalpha), estrogen receptor acceptor gamma (PPARgamma), peroxisome proliferator activated receptor gamma (PPARgamma), retinoid X receptor alpha (XXRalpha), caping in the chromatin of a cell. Regulation of gene expression (such as nuclear receptor genes) will be useful in treatment of various capical expression (such residing in the chromatin of a cell. Regulation of gene expression (such as nuclear receptor games), all be useful in treatment of various carry out the regulatory molecule as described above, is contacted with the cell to carry out the regulation. The method is also useful for modulation of gene expression for therapeutic or prophylactic applications e.g., diabeter centinopathy, ischaemia, macular degeneration, rheumatoid arthritis, psoriasis, HIV infection, sickle cell anemia, Alzheimer's
                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Regulating expression of gene by contacting cell with regulatory molecule comprising DNA-binding domain targeted to sequence within accessible region of cellular chromatin associated with a gene, and functional

disease, stroke, etc. The method also has applications in pharmaceutical research of both nuclear receptors of known function as well as those of winknown function. The method also facilitates development of tissue and animal models of disease states, drug validation, and therapeutic product development. The methods also allow identification of the role of nuclear receptors of unknown functions in cellular homeostasis. Sequences ABB80791-1817 represent zinc finger protein (ZFP) DNA-binding domains that were fused to functional domains and tested for their ability to regulate expression of the ER in living cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New heparanase polynucleotide, useful for controlling disease states such as tumor metastasis, inflammatory diseases and allograft rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel heparanase sequences, particularly novel sequences from the regulatory regions upstream and downstream of the coding region. The activity of polymucleotides of the invention may be described as, cytostatic, vasotropic, antidiabetic, anti-HIV, ophthalmological, antitheumatic, antiarthritic, antipsoriatic, antianaemic, neuroprotective, nootropic, cerebroprotective, antibacterial, virucide, protozoacide, fungicide, antinflammatory, cardiant and immunosuppressive. Modulating expression of heparanase gene using constructs of the invention is useful for facilitating targeted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; heparanase; cytostatic; vasotropic; antidiabetic; anti-HIV; ophthalmological; antirheumatic; antiarthritic; antipsoriatic; antipsoriatic; antibacterive; neuroprotective; notropic; cerebroprotective; antibacterial; virucide; protozoacide; fungicide; antiinflammatory; cardiant; immunosuppressive; tumour metastasis; inflammatory disease; allograft rejection; call migration; anglogenesis; basement membrane; extracellular matrix; cancer; ischaemia; diabetic retinopathy; macular degeneration; rheumatoid arthritis; psoriasis; HIV infection; slicke cell anaemia; Alzheimer's disease; macular dystrophy; neurodegenerative disease; vascular disease; candiovascular disease; cystic fibrosis; stroke; gene therapy; zinc finger protein; ZFP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               06-JUN-2002
```

control of disease states such as tumour metastasis, inflammatory diseases, allograft rejection, and for inhibiting processes such as cell migration, angiogenesis, and degradation of the basement membrane and/or extracellular matrix. Heparanse-targeted DNA binding domains modulates gene expression, and are useful for therapeutic or prophylactic applications, for e.g. cancer, ischemia, diabetic retinopathy, macular degeneration, rheumatoid arthritis, psoriasis, HIV infection, sickle cell anaemia, Alzheimer's disease, unscular disease, vascular disease, vascular disease, cardiovascular disease, cystic fibrosis, stroke, and bacterial, protozoal, fungal and viral infection. Constructs of the invention may also be useful in gene therapy. The current sequence represents a finger of a three-finger ZFP (zinc finger protein), which has a target site in the human heparanase gene

antianaemic, neuroprotective, nootropic, cerebroprotective, antibacterial, virucide, protozoacide, fungicide, antiinflammatory, cardiant and immunosuppressive. Modulating expression of heparanase gene using constructs of the invention is useful for facilitating targeted

Also described are: (1) a polypeptide (II) comprising (I); (2) a polymucleotide (III) encoding (I) or (II); and (3) designing (M) (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, selecting the F2 zinc finger such that it binds to the S2 target subsite, and selecting the F3 zinc finger such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus.
                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Zinc finger protein; ZFP; DNA binding protein; zinc finger.

The invention relates to novel heparanase sequences, particularly novel sequences from the regulatory regions upstream and downstream of the coding region. The activity of polynucleotides of the invention may be described as, cytostatic, vasotropic, antidiabetic, anti-HIV, ophthalmological, antirheumatic, antiarthritic, antipsoriatic,

ö
that it binds to the S3 target subsite, thus designing (I) that binds to a target site. (I) is useful for recognition of triplet target subsites having the nucleotide G in the 5'-most position of the subsite. (I) is useful in studying gene function, and for human therapeutics and plant engineering. (I), (II) or (III) is useful in therapeutic methods to modulate the expression of a target region within a subject, in a sample, and in assays to detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of gene expression. (I) has improved affinity and specificity for their target sequences, as well as enhanced biological activity, ABQ71213 to ABQ72214 and ABP48191 to ABP51230 reperseent DNA target sequences and zinc finger peptides which are given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (F1), a second (F2), and a third (F3) zinc finger, ordered F1, F2, F3 from N-terminus to C-terminus, where the target site comprises in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (II) comprising (I); (2) a polymucleotide (III) encoding (I) or (II); and (3) designing (M) (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, selecting the F2 zinc finger such that it binds to the S2 target subsite, and selecting the F3 zinc finger such that it binds to the S3 target subsite, thus designing (I) that binds to a target subsite, thus designing (I) that binds to a target subsite for recognition of triplet target subsites having the nucleotide of in the 5'-most position of the subsite. (I) is useful in studying gene function, and for human therapeutics and plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Zinc finger protein; ZFP; DNA binding protein; zinc finger.

The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (F1), a second (F2), and a third (F3) and cinc finger, ordered F1, F2, F2 from N-terminus to C-terminus, where the target site comprises, in 3.-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (1) a polypebtide (II) comprising (I); (2) a polynucleotide (III) encoding (I) or (II); and (S1) comprising (M) (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, and selecting the F2 zinc finger such that it binds to the S2 target subsite, thus designing (I) that binds to the S2 target subsite, thus designing (I) that binds to a target site. (I) is useful for recognition of triplet target subsites (Naving the nucleotide G in the 5'-most position of the subsite. (I) is useful in studying gene function, and for human therapeutics and plant complete the expression of a target region within a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of
                                                                                                                                                                                                                                                                                         ö
engineering. (I), (II) or (III) is useful in therapeutic methods to modulate the expression of a target region within a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of gene expression. (I) has improved affinity and specificity for their target sequences, as well as enhanced biological activity. ABQ71213 to ABQ72214 and ABP48191 to ABP51230 represent DNA target sequences and zinc finger peptides which are given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus.

                                                                                                                                                 셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) condered FI, F2, F3 from N-terminus to C-terminus, where the carget site comprises, in 3'-5' direction, a first (SI), a second (S2), target site comprises, in 3'-5' direction, a first (SI), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (CI) comprising (I); (2) a polynuclectide (III) encoding (I) or (III); and (CI) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, and selecting the F2 zinc finger such that it binds to the S2 target subsite, and selecting the F2 zinc finger such that it binds to the S3 target subsite, thus designing (I) that binds to the S1 target subsite, thus designing (I) that binds to the S3 target subsite, thus designing (I) that binds to the S1 target subsite, thus designing (I) that binds to the S1 target subsite, thus designing (I) is useful for recognition of triplet target subsites (CI) a target subsite (CI) and the S1 target subsite (CI) is useful in therapeutic methods to captinering the expression of a target region within a subject, in circle ample, and in assays to determined the phenotype and function of the subsite (CI) and sample, and in assays to determined the phenotype and function of target sequences, as well as enhanced biological activity, ABQ11213 to the ABQ72214 and ABP48191 to ABP51230 represent DNA target sequences and zinc finger peptides which are given in the exemplification of the present
                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus.
gene expression. (I) has improved affinity and specificity for their target sequences, as well as enhanced biological activity. ABQ71213 to ABQ72214 and ABP48191 to ABP51230 represent DNA target sequences and zinc finger peptides which are given in the exemplification of the present
                                                                                                                                                     Gaps

The present invention describes a zinc finger protein (1) that binds to a target site, comprising a first (F1), a second (F2), and a third (F3) carget site, comprising a first (F1), a second (F2), and a third (F3) target site comprises, in 3'-5' direction, a first (51), a second (62), and a third (53) target subsite. Also described are: (1) a polypeptide (C (II) comprising (1); (2) a polymucleotide (III) encoding (I) or (II); and (2) designing (I); (2) a polymucleotide (III) encoding (I) or (II); and (2) designing (I); (2) a polymucleotide (III) encoding (I) or (II); and (2) binds to the S1 target subsite, selecting the F2 zinc finger such that it binds to the S2 target subsite, and selecting the F2 zinc finger such that it binds to the S3 target subsite, thus designing (I) that binds to that it binds to the S3 target subsite, thus designing (I) that binds to a target site. (I) is useful for recognition of triplet target subsites (C a target site. (I) is useful in studying gene function, and for human therapeutic methods to useful in studying gene function, and for human therapeutic methods to diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of target sequences, as well as enhanced biological activity. ABQ11213 to target peptides which are given in the exemplification of the present
                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus.
                                                                                                                                      Gaps
                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Zinc finger protein; ZFP; DNA binding protein; zinc finger.

The present line interitors a first (F1), a second (F2), and a third first (F3), and a third (F3) cance finger, comprising a first (F1), a second (F2), and a third (F3) and a third (G3) target site comprises, in 3.-5 direction, a first (G1), a second (F2), and a third (G3) target subsite. Also described are: (1) a polypetide (T1) comprising (M) (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, selecting the F2 zinc finger such that it binds to the S2 target subsite, and selecting the F3 zinc finger such that it binds to the S3 target subsite, thus designing (1) that binds to the S3 target subsite, thus designing (1) that binds to that it binds to the S3 target subsite, thus designing (1) that binds to that it binds to the S3 target subsite, thus designing (1) that binds to useful in studying gene function, and for human therapeutics and plant would the expression of a target region within a subject, in charget the expression of a target region within a subject, in charget nucleic acid in a sample, and in assays to determined the phenotype and function of target sequences, as well as enhanced biological activity. AB071213 to the finger septides which are given in the exemplification of the present

The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) and a third (F3) and a third (F3) tranger, ordered FI, F2, F3 from N-terminus to C-terminus, where the target site comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (II) comprising (I); (2) a polynucleotide (III) encoding (I) or (II); and (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, selecting the F2 zinc finger such that it binds to the S1 target subsite, thus designing (I) that binds to that it binds to the S3 target subsite, thus designing (I) that binds to a target site. (I) is useful for recognition of triplet target subsites considered in studying gene function, and for human therapeutic and plant engineering. (I), (II) or (III) is useful in therapeutic methods to modulate the expression of a target region within a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of the supsition. (I) has improved affinity and specificity for their target sequences, as well as enhanced biological activity. ABG71213 to ABG72214 and ABB78130 to Expression in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  6

The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) and carget site, comprising a first (FI), a second (F2), and a third (F3) and a third (F3) target site comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (CI) comprising (I); (I2) a polyfuncteotide (III) encoding (I3) or (III); and (I3) designing (I); (I2) a polyfuncteotide (III) encoding (I3) or (III); and (I3) designing (I); (I3) involves selecting the F2 zinc finger such that it binds to the S1 target subsite, and selecting the F2 zinc finger such that it comparises to the S2 target subsite, thus designing (I) that binds to the S3 target subsite, thus designing (I) that binds to the S1 target subsite, thus designing (I) that binds to the S1 target subsite, thus designing (I) that binds to the S1 target subsite, thus designing (I) that binds to useful in studying gene function, and for human therapeutic and plant cangineering. (I), (II) or (III) is useful in therapeutic methods to condidance the expression of a target region within a subject, in cinample, and in assays to determined the phenotype and function of the supsite of target sequences, as well as enhanced biological activity, AB071213 to the invention are given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus.
                                                                                                                                                                           Zinc finger protein; ZFP; DNA binding protein; zinc finger.
                                                                                                                     Zinc finger protein related peptide motif SEQ ID NO:2640.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) and a third (F3) and a third (F3) target site, comprising a first (F1), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (II) comprising (I); (2) a polynucleotide (III) encoding (I) or (II); and (I) and the S1 target subsite, selecting the F1 zinc finger such that it binds to the S1 target subsite, and selecting the F2 zinc finger such that it binds to the S2 target subsite, and selecting the F3 zinc finger such that it comparison (I) is useful for recognition of triplet target subsites a target size (I) is useful for recognition of triplet target subsites a target size. (I) is useful for recognition of triplet target subsites are useful in studying gene function, and for human therapeutic and plant engineering. (I), (II) or (III) is useful in therapeutic methods to modulate the expression of a target region within a subject, in clasmostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of a superession. (I) has improved affinity and specificity for their target sequences, as well as enhanced biological activity. AB071213 to their increase the peptides which are given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              임
                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (F1), a second (F2), and a third (F3) target site, comprising a first (F1), a second (F2), and a third (F3) canget site comprises, in 3'-5' direction, a first (G1), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (II) comprising (I); (2) a polynuclectide (III) encoding (I) or (II); and (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, selecting the F2 zinc finger such that it binds to the S1 target subsite, and selecting the F3 zinc finger such that it binds to the S3 target subsite, and selecting of F4 F3 zinc finger such that it binds to the S3 target subsite, and selecting of the S1 target subsite. (I) is useful for recognition of triplet target subsites a target site. (I) is useful for recognition of the subsite. (I) is useful in studying gene function, and for human therapeutic methods to modulate the expression of a target region within a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of the sample, and and an assays to determined the phenotype and function of target sequences, as well as enhanced affinity and specificity for their target sequences, as well as enhanced biological activity. ABQ71213 to ABG72214 and ABB74230 represent DNA target sequences and zinc finger peptides which are given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                 New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .

The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) and cardered FI, F2, F3 from N-terminus to C-terminus, where the carder site comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (CT) comprising (I); (2) a polyhucleotide (III) encoding (I) or (II); and (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, selecting the F2 zinc finger such that it comparison (I) is useful for recognition of triplet target subsites that it binds to the S3 target subsite, thus designing (I) that binds to the S1 target subsite, thus designing (I) that binds to the S3 target subsite, thus designing (I) that binds to a target site. (I) is useful for recognition of triplet target subsites (CT) a target site. (I) is useful for recognition of the subsite. (I) is useful in studying gene function, and for human therapeutic and plant engineering. (I), (II) or (III) is useful in therapeutic methods to modulate the expression of a target region within a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of the subsites. (I) and in assays to determined the phenotype and function of the SQUIZI3 to ABQ12214 and ABBPS1230 represent DNA target sequences and zinc finger peptides which are given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Sequence 14, Application US/09731558
Patent NO. 6503717
GENERAL INFORMATION:
APPLICANT: Case, Casey Christopher
APPLICANT: Liu, Qiang
APPLICANT: Rabar, Edward J.
APPLICANT: Sangame Blosciences, Inc.
TITLE OF INVENTION: Methods of Using Randomized Libraries of Zinc Finger
TITLE OF INVENTION: Proteins for the Identification of Gene Function
FILE REFERENCE: 019496-0003210US
CURRENT APPLICATION NUMBER: US/09/731,558
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                       (without alignments)
28.393 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 3, Ay

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INCORNATION:
APPLICANT: Cox III, George No. 6534261bert
APPLICANT: Case, Casey Christopher
APPLICANT: Essey Christophen
APPLICANT: Essenberg, Stephen P.
APPLICANT: Breath, Sharon Raye
APPLICANT: Spratt, Sharon Raye
APPLICANT: Sangamo Biosciences, Inc.
TITLE OF INVENTION: Regulation of Endogenous Gene Expression in Cells Using
TITLE OF INVENTION: Zinc Finger Proteins
FILE REFERENCE: 01946-0022000S
CURRENT APPLICATION NUMBER: US/09/229,037A
CURRENT FILING DATE: 1999-01-12

TITLE OF INVENTION: Methods of Using Randomized Libraries of Zinc Finger

TITLE OF INVENTION: Proteins for the Identification of Gene Function

FILE REFERENCE: 019456-001210US

CURRENT APPLICATION NUMBER: US/09/731,558
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-09-478-681-30
is Sequence 30, Application US/09478681
j Patent No. 6607882
is GENERAL INFORMATION:
is APPLICANT: Case, Casey Christopher
APPLICANT: Saron Case, Casey Christopher
APPLICANT: Spratt, Sharon K.
is APPLICANT: Spratt, Sharon K.
is APPLICANT: Spratt, Sharon K.
is TITLE OF INVENTION: REGULATION OF ENDOGENOUS GENE EXPRESSION IN CELLS
ITILE OF INVENTION: USING ZINC FINGER PROTEINS
ITILE OF INVENTION: USING ZINC FINGER PROTEINS
ITILE OF SEQ ID NOS: 43
CURRENT PILING DATE: 2000-01-06
NUMBER OP SEQ ID NOS: 43
SOFTWARE: PATENTIN UVER: 2.0
SEQ ID NO 30
LENGTH: 196
LENGTH: 196
ITYPE: PRT
ORGANISM: Artificial Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New zinc finger protein that binds to target site in vascular endothelial growth factor gene, useful for modulating expression of the gene and for treating atherosclerosis, ischemia, arthritis, wound or ulcer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a zinc finger protein that binds to a target site in one or more vascular endothelial growth factor (VEGF) genes. The protein is useful for modulating expression of a VEGF gene, thereby regulating angiogenesis and vasculogenesis. This can be used to treat atherosclerosis, ischaemia, arthritis, wounds, ulcers, tumours, diabetic retinopathy or psoriasis. The present sequence is a peptide shown in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Wolffe A, Eisenberg SP;
                                                                                                                                                                                                                                                                                             Jamieson A, Liu Q, Liu P, Wolffe A, Eisenberg SP;

Novel zinc finger protein that binds to a target site, useful for modulating vascular endothelial growth factor gene expression, for modulating angiogenesis, for wound healing and for treating ischemia.

Disclosure; Page 43; 120pp; English.

The invention relates to a zinc finger protein that binds to a target site. The zinc finger protein is useful for modulating expression of a conscious prover factor (VEGF) gene. The expression of a number of splice variants of 'VEGF gene is modulated. A number of target contacted with a number of zinc finger proteins and each zinc finger protein binds to a distinct target site. The zinc finger protein cis administered in combination with a delivery vehicle, or its nucleic acid is administered into the cell, either in naked form or delivered in the expression vector. The zinc finger protein or nucleic acid is useful contracted or expression vector. The zinc finger protein is also useful for modulating angiogenesis, by introducing the zinc finger protein is also useful for modulating angiogenesis, by introducing the zinc finger protein into an animal, where the animal has a genome comprising a target site within a WGGF gene. The zinc finger protein into an animal, where the animal has a genome comprising a target site within a WGGF gene. The zinc finger protein and nucleic acid are also useful for comprising a target site within a wider gene. The zinc finger protein and nucleic acid are also useful for comprising a target site within a wider acid are also useful for comprising a target site within a wider acid are also useful for metaliating and/or maintaining pregnancy and for supporting embryogenesis. The zinc finger protein and its nucleic acid are also useful in surgical applications. The present sequence represents the anno acid sequence of a human VEGF targeted zinc finger protein ZFP recognition helix

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 14, Application US/09731558
Patent No. 650371.
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Case, Casey Christopher
APPLICANT: Liu, Qiang
APPLICANT: Rebar, Edward J.
APPLICANT: Sangamo Biosciences, Inc.
TITLE OF INVENTION: Methods of Using Randomized Libraries of Zinc Finger
TITLE OF INVENTION: Proceins for the Identification of Gene Function
FILE REPERENCE: 019496-003210105
CURRENT APPLICATION NUMBER: US/09/731,558
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                         (without alignments)

                                                                                                                                                                                               RESULT 8

US-09-478-681-30

i Sequence 30, Application US/09478681

patent No. 6607882

GENERAL INFORMATION:

APPLICANT: Cax III, George N.

APPLICANT: Case, Casey Christopher

APPLICANT: Bisenberg, Stephen P.

APPLICANT: Bisenberg, Stephen P.

APPLICANT: Bisenberg, Stephen P.

APPLICANT: Bisenberg, Stephen P.

TITLE OF INVENTION: REGULATION OF ENDOGENOUS GENE EXPRESSION IN CELLS

TITLE OF INVENTION: USING ZINC PINGER PROTEINS

TILE REFERENCE: 8325-0002.10 / 32-U33

CURRENT APPLICATION NUMBER: US/09/478,681

CURRENT APPLICATION NUMBER: US/09/478,681

SOFTWARE: PATENT OF IN OS: 43

TITLE OF INVENTION: Proteins for the Identification of Gene Function
FILE REFERENCE: 019496-003210US
CURRENT APPLICATION NUMBER: US/09/731,558
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                           December 27, 2004, 20:31:09 ; Search time 16.35 Seconds (without alignments) 28.393 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1: /cgn2 6/ptodata/1/iaa/5A COMB.pep:*
